Multiple Selection Of Image in iOS

hey I'm new in iOS app developing world...

1

I had open the gallery and selected only one image and displayed on image view.

Now I want to select multiple image from Gallery.

So my question is

How should I select multiple image from Gallery in iOS and display on UIImageView???

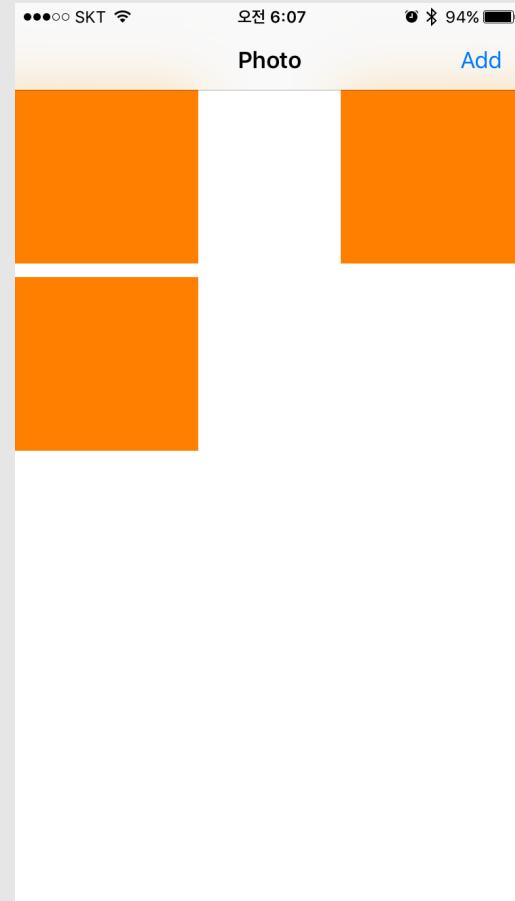

Generally you should not pick multiple images from iOS native picker so from `UIImagePickerController` you can get only one picture. If you need to pick more you need a custom image picker, such as **ELCImagePickerController**. It works well! You can download it [here](#).

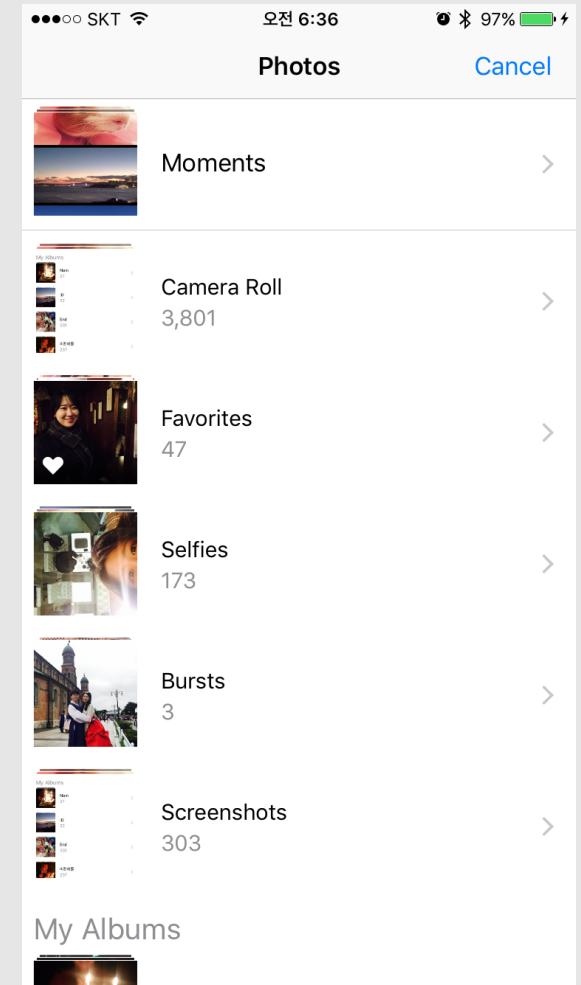

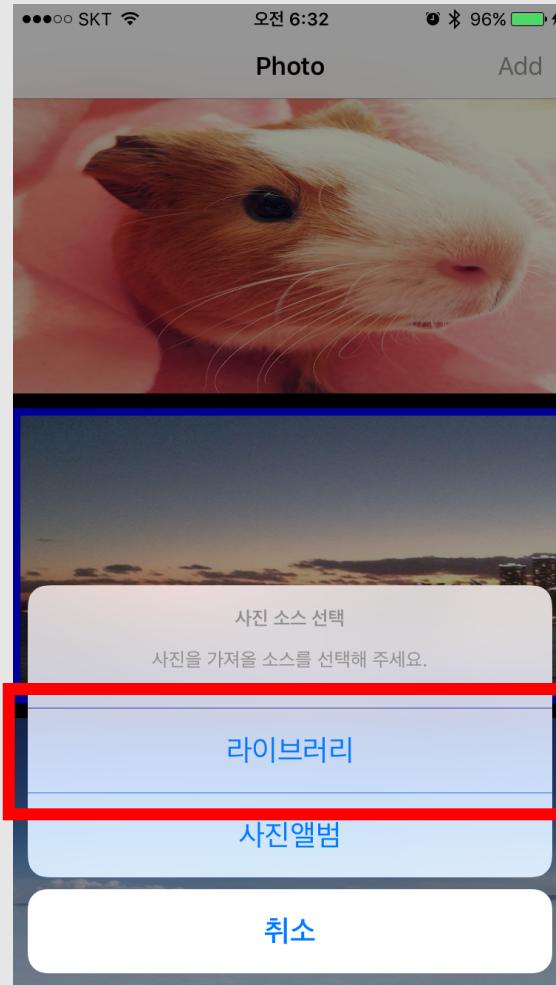

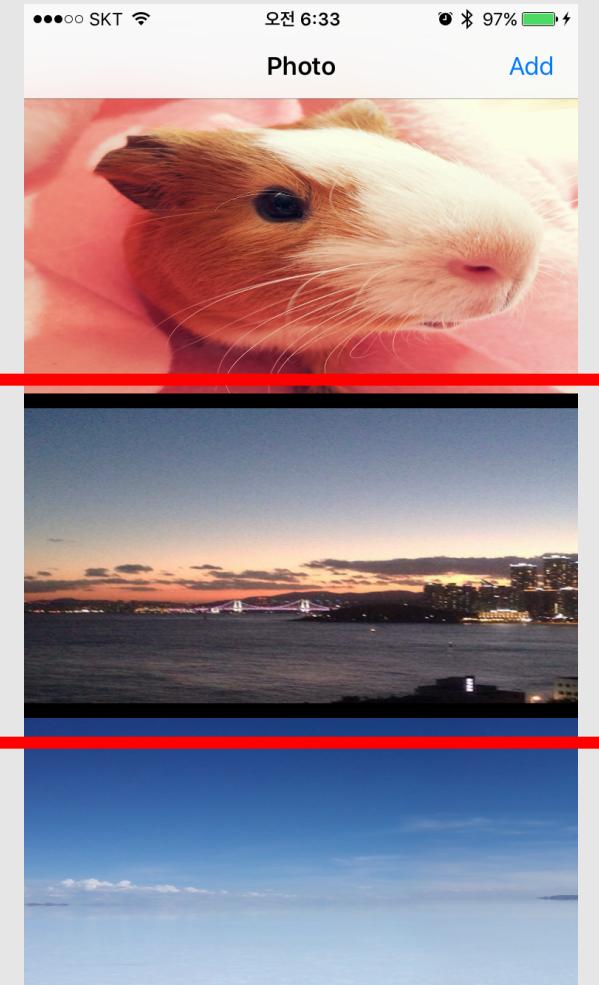

`UIImagePickerController` doesn't support multiple selection by default, but you can use libraries like [QBImagePicker](#) to achieve that.

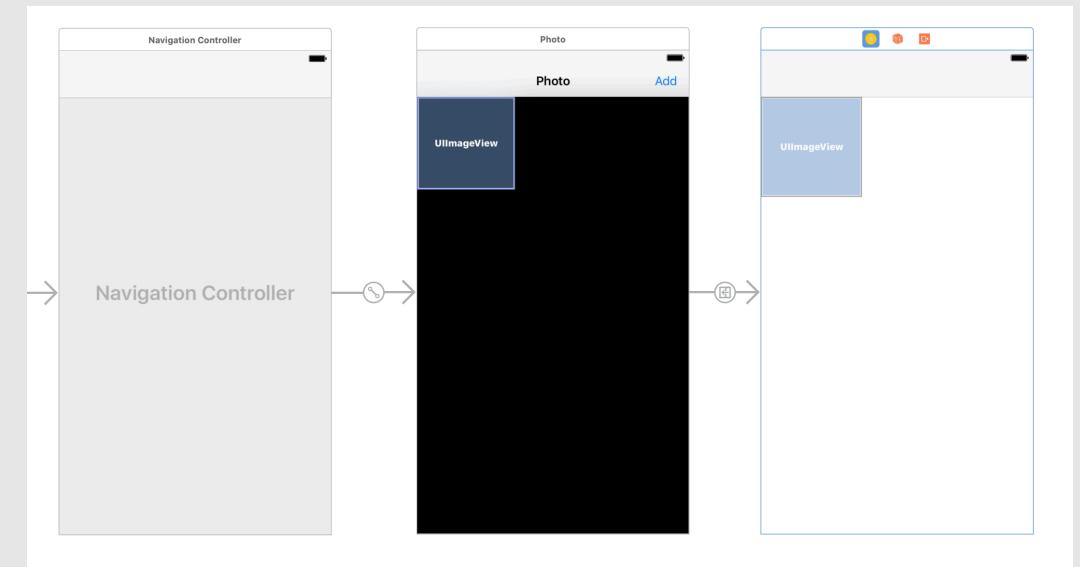

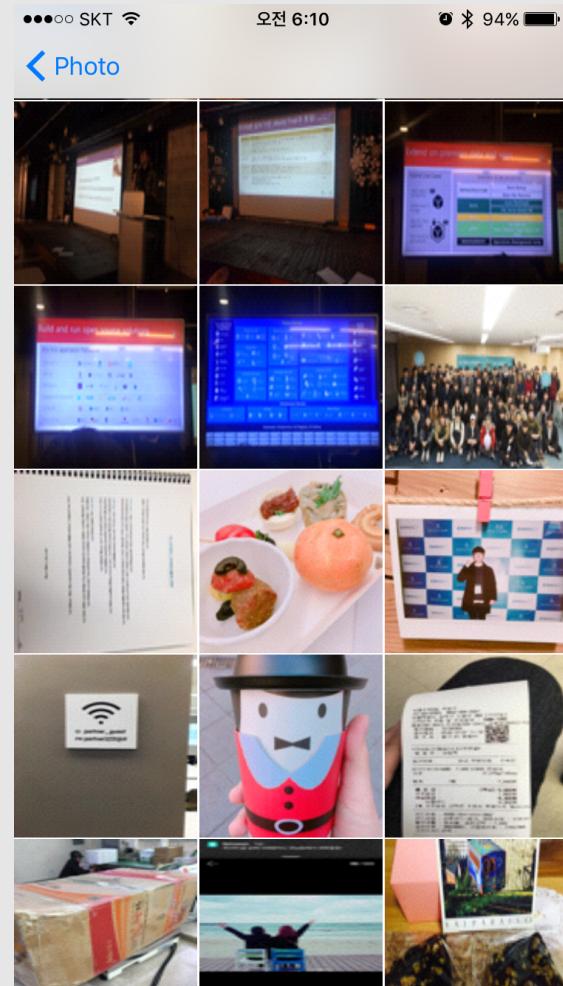

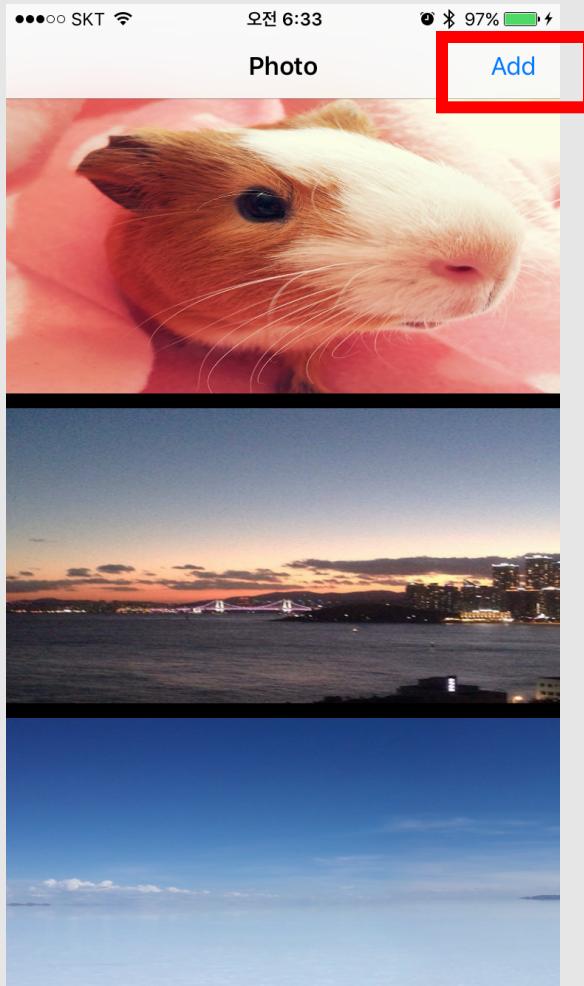

ELCImagePickerController, QBImagePicker 오픈소스 존재

UICollectionView

Manages an ordered collection of data items and presents them using customizable layouts.

PHAsset

A representation of an image, video or Live Photo in the Photos library

- <https://developer.apple.com/reference/photos/phasset>

PHFetchResult

An ordered list of assets or collections returned from a Photos fetch method

- <https://developer.apple.com/reference/photos/phfetchresult>

PHImageManager

Provides methods for retrieving or generating preview thumbnails and full-size image or video data associated with Photos assets.

- <https://developer.apple.com/reference/photos/phimagemanager>
